NCE Project No. 992.04.55

Executive Summary

Nichols Consulting Engineers, Chtd. (NCE) was selected by the Fresno Council of Governments (Fresno COG) to update the Pavement Management Program (PMP) of the City of Kerman (City) using a walking survey. The purpose of the PMP is to help educate policymakers about the current condition of the street network and the impact of various scenarios on future network conditions. This report summarizes the findings from the 2024/25 PMP update.

The City is responsible for maintaining approximately 60.8 centerline miles of paved streets, representing a substantial investment of approximately \$127.4 million. The street network includes 2.0 centerline miles of arterial streets, 16.7 miles of collector streets, 33.1 miles of residential streets, and 9.0 miles of other freeways or expressways (OFEs). In July 2025, NCE collected pavement condition data throughout the entire network using MTC distress protocols. Survey data were entered into the StreetSaver® database, which the City uses as a decision-support tool.

Overall, the City’s pavement network is currently in “Good” condition with an average pavement condition index (PCI) of 71. Overall, 55.5 percent of the City’s street network area is in “Good” condition, approximately 26.9 percent is in “Fair” condition, 15.3 percent is in “Poor” condition, and 2.3 percent is in “Very Poor” condition.

The budget needs analysis indicated that the City needs to spend \$39.2 million over the next 10 years to bring the street network to a condition that can be maintained with on-going preventive maintenance in the most cost-effective way. To establish a pragmatic approach, 2 budget scenarios were examined using a yearly inflation rate of 3.0 percent for a 10-year analysis period. The budgeted amounts for the 2 scenarios include paving and non-paving costs, staff time, design, construction management, and contingencies.

The following table summarizes each scenario and its corresponding 10-year budget, PCI, and deferred maintenance costs at the end of the analysis period.

Table A. Budget Scenario Analysis Summary

Scenario	Description	Cumulative 10-year Budget (\$M)	End of FY 34/35	
			Network PCI	Deferred Maintenance (\$M)
1	City’s Current Budget	32.5	75	22.2
2	Maintain PCI of 71	28.6	71	28.7

NCE recommends that the City remain the funding level to improve the network condition and decrease deferred maintenance. Scenario 1 accomplishes both these objectives by increasing PCI from 71 to 65 and decreasing the current deferred maintenance from \$25.6 million to \$22.2 million by the end of FY 34/35. It should be noted that under Scenario 2, the required annual budget is approximately \$0.4 million lower than the City’s Current Budget.

1 Introduction and Background

Nichols Consulting Engineers, Chtd. (NCE) was selected by the Fresno Council of Governments (Fresno COG) to update the Pavement Management Program (PMP) of the City of Kerman (City).

In general, PMPs are “designed to provide objective information and useful data so that managers can make more consistent, cost-effective, and defensible decisions related to the preservation of a pavement network.”¹ In other words, a PMP is designed to assist cities with answering questions such as:

- What does the City’s pavement network include?
- What is the current condition of the pavement network?
- What are the City’s current M&R strategies?
- How much funding is required to perform all needed M&R treatments over the next analysis period (typically 4 to 10 years)?
- What effect does the City’s existing funding have on the network condition and overall deferred maintenance²?
- What effect will other funding amounts have on the network condition and deferred maintenance?

To update the City’s PMP, NCE surveyed pavement condition in compliance with ASTM D6433³. Walking surveys were performed by one or two-person crews to record all pavement distresses. The surveys did not include non-pavement issues such as traffic, safety and street hazards, geometric issues, shoulders, sidewalks, curb and gutters, drainage issues, or immediate maintenance needs.

After inspection, all survey data were entered into the City’s StreetSaver® database, and Pavement Condition Index (PCI) calculations were performed. NCE then reviewed and updated the City’s decision tree, including maintenance and rehabilitation (M&R) strategies and treatment unit costs, analyzed the budget needs, and modeled 3 budget scenarios for the street network.

1.1 Purpose

The purpose of this report is to provide a comprehensive understanding of the overall pavement condition and facilitate effective planning and maintenance strategies for the City. The report assists policymakers in decision-making by showing the impacts of different funding strategies on the City’s streets over the next 10 years. It also assists the City with identifying M&R priorities specific to the City’s needs and highlights options for improving the current PCI. These options are developed by conducting "what-if" analyses using StreetSaver® software.

¹ AASHTO *Guidelines for Pavement Management Systems*. (Washington, DC: American Association of State Highway and Transportation Officials, 1990).

² Deferred maintenance refers to maintenance activities that were either not performed as scheduled or were postponed to a future period due to insufficient funding. This calculation encompasses costs associated with CICM (Construction Inspection and Construction Management), design, and contingencies.

³ ASTM. *ASTM D6433. Standard Practice for Roads and Parking Lots Pavement Condition Index Surveys*. (West Conshohocken, PA: ASTM International, 2023), astm.org.

2 Network Summary

The City is responsible for maintaining approximately 60.8 centerline miles of pavement, which includes 2.0 centerline miles of arterial streets, 16.7 miles of collector streets, 33.1 miles of residential streets, and 9.0 miles of other freeways or expressways (OFEs). The network is composed primarily of asphalt concrete (AC) pavement sections. There are 6 gravel sections, totaling about 2.68 miles, that were not surveyed and are not included in the pavement needs or budget analysis. Table 1 summarizes the street network by functional class. Appendix A lists all the streets within the network, providing details such as the street name, beginning and ending cross streets, surface type, functional classification, inspection date, and the inspected PCI.

Table 1. Network Summary Statistics by Functional Class.

Functional Class	Centerline Mileage	Percent Area	Weighted Average PCI ¹	Condition
Arterials	2.0	13.5%	66	Good
Collectors	16.7	27.3%	73	Good
Residential	33.1	56.4%	69	Fair
OFEs	9.0	2.8%	78	Good
Total	60.8	100.0%	71	Good
Gravel	2.68	-	-	-

*The weighted average PCI is calculated by multiplying the area of each street section by the PCI of that section, totaling all sections together, and then dividing by the total area of the network area or functional classification.

Street pavements are one of the City’s most valuable assets. The total street network replacement cost is estimated to be approximately \$127.4 million. This can be viewed as the value of the pavement network and is the amount needed to fund a reconstruction of the entire paved network. The replacement cost is calculated by multiplying the total pavement area by the unit cost of reconstruction of the pavement structure. It does not include related infrastructure assets such as sidewalks, signals, markings, signs, or storm drains.

3 Pavement Condition

The PCI is a measurement of pavement grade or condition and ranges from 0 to 100. A newly constructed street will have a PCI of 100, while a street in very poor condition will have a PCI of 24 or less. Pavement conditions are primarily affected by climate, traffic loads and volumes, construction materials, and age. For asphalt pavement, distress might include:

- Alligator (Fatigue) Cracking
- Bleeding
- Block Cracking
- Bumps and Sags
- Corrugation
- Depression
- Edge Cracking
- Joint Reflection Cracking
- Lane/Shoulder Drop-Off
- Longitudinal/Transverse Cracking
- Patching and Utility Cut Patching
- Polished Aggregate
- Potholes
- Railroad Crossing
- Rutting
- Shoving
- Slippage Cracking
- Swell
- Raveling
- Weathering

The photographs in Figure 1 illustrate examples of asphalt concrete streets with different PCI ranges.

Figure 1. Examples of Streets with Different PCIs.

The definitions of the pavement condition categories and PCI ranges are shown in Table 2. These are the PCI “breakpoints” in StreetSaver®.

Table 2. Pavement Condition Categories.

Condition Category	PCI Range	Description
Good	70 – 100	Pavements with minimal surface distress that may include some hairline longitudinal/transverse cracks and/or weathering. The pavement structure is sound, and minor oxidation may occur.
Fair	50 – 69	Pavements with significant distress that is predominantly non-load-related, such as longitudinal/transverse cracks, bleeding, block cracking, weathering, raveling, etc. The pavement structure is sound, and some oxidation has occurred.
Poor	25 – 49	Pavements with moderate to severe surface distresses. Extensive weathering or raveling, block cracking, and load-related distresses such as alligator cracking, rutting, and potholes may occur.
Very Poor	0 – 24	Pavements with severe weather-related distress and large quantities of load-related distress. These pavements are nearing the end of their service life.

3.1 City’s Current Pavement Condition

The City’s current overall weighted average PCI for the network is 71, which places the overall street network pavement condition in the “Good” category. Figure 2 shows the PCIs for streets network with different functional classifications. Street condition assessments by functional class indicate total network that 55.5% are categorized as 'Good,' 26.9% as 'Fair,' 15.3% as 'Poor,' and 2.3% as 'Very Poor'.

Figure 2. Street Network Percent Pavement Area by Condition Category.

3.2 PCI Comparison with Neighboring Agencies

Figure 3 shows the City’s average network PCI compared to neighboring agencies as well as the statewide average PCI from the 2022 California Statewide Local Streets and Roads Needs Assessment⁴. The City’s PCI of 71 positions the City six points above the 2022 statewide average of 65.

Figure 3. Network PCI for Different Agencies.

⁴ “California Statewide Local Streets and Roads Needs Assessment 2022 Update”. Nichols Consulting Engineers, Chtd., CA, 2022.

4 Maintenance and Rehabilitation Strategies

In general, surface treatments such as crack seals or slurry seals are used when the pavements are in “Fair” to “Good” condition. This type of treatment is usually considered “preventive maintenance”. When the pavement condition deteriorates to lower levels, overlays and full-depth structure replacements must be performed. These are considered “rehabilitation” or “reconstruction”. In addition, base repairs for more localized distresses are commonly done in preparation for overlay and slurry seal treatments.

Based on a discussion with City staff, a detailed M&R decision tree was prepared and is included in Appendix B. Figure 4 presents the decision tree of residential. This determined the most effective and realistic treatments for each group of streets by functional class and condition category.

Figure 4. Costs⁵ of Maintaining Residential over their Service Lives.

Figure 4 illustrates how costs of pavement treatment increase as pavement conditions decrease over time. The dollar amounts shown in Figure 4 are based on recent bids received by the City and illustrate that it costs much less to maintain Residential in good condition than to repair failed streets. By letting pavements deteriorate, streets that once cost about \$1.75 per square yard to treat with fog seal may, in a few years, cost about \$84.75 per square yard to reconstruct. Note that a fog seal can be applied on approximately 48 times as many lane miles as those requiring reconstruction for pavements in failed condition.

Because of this, a key pavement management repair strategy is to keep streets in “Good” to “Fair” condition from deteriorating. This is particularly true for streets in the “Fair” range since pavement deterioration will accelerate if left untreated. Pavements in “Fair” condition show some distress and require more than preventive

⁵ In addition to the contractor’s prices, unit costs are loaded to include staff time, design, construction management, contingencies, and non-asphalt concrete related work.

maintenance. At this point, a well-designed pavement will have reached between 35 and 50 percent of its life, and a thick overlay with fabric would be required to bring its condition back to “Good.” For pavements in the “Poor” category, approximately 30 percent of service life is left, and a thicker grind and overlay (2.5 to 4.0 inches) would be required to bring its condition back to “Good”. Pavements in “Very Poor” condition are near the ends of their service lives and often exhibit severe forms of distress such as potholes, rutting, and extensive cracking. At this stage, reconstruction is typically required. In general, arterials are expected to have a service life of approximately 25 years, while residential streets are expected to have a service life exceeding 30 years.

5 Budget Analysis

Based on the principle that it costs less to maintain streets in good condition than it does to repair those that have failed, cost-effective PMPs employ strategies that first eliminate deferred maintenance and then preserve the network with ongoing preventive maintenance. Such strategies bring the network condition to an optimal PCI that can be maintained over time.

5.1 Budget Needs

The first step in developing a cost-effective strategy is to determine, assuming an unconstrained budget, the total maintenance budget “needs” of the network, i.e., the funding required for every street in the network to reach optimal conditions based on the policy established in the decision tree. For the City, the cost of treatment(s) over the analysis period was calculated by multiplying unit costs by pavement section area at an annual inflation rate of 3.0 percent over a 10-year analysis period.

The budget needs are estimated to be approximately \$39.2 million until the end of FY 34/35. Of the total budget needs, approximately \$31.3 million (79.8 percent) would be devoted to rehabilitation, while the rest would be allocated for preventive maintenance. If the City follows this “ideal” strategy, the average network PCI will increase to 85 by FY 34/35. Table 3 below shows the impacts of expenditures on the PCI, assuming an unconstrained budget. Appendix C presents the following information regarding the budget needs: projected PCI, cost summary, and a summary of the preventive and rehabilitation maintenance treatments.

Table 3. Budget Needs.

Fiscal Year	Current	25/26	26/27	27/28	28/29	29/30	30/31	31/32	32/33	33/34	34/35	Total
Total Budget Needs (\$M)	N/A	25.6	1.1	1.2	0.4	0.4	4.3	0.6	1.9	2.3	1.4	39.2
Rehabilitation (\$M)	N/A	25.0	1.1	0.9	0.0	0.0	2.6	0.2	0.4	0.7	0.4	31.3
Preventive Maintenance (\$M)	N/A	0.6	0.0	0.3	0.4	0.4	1.7	0.4	1.5	1.6	1.0	7.9
Treated PCI	71	91	87	86	85	84	87	86	85	85	85	N/A
Untreated PCI	71	71	70	68	66	64	61	59	57	54	52	N/A

5.2 Budget Scenarios

Having determined the street network's maintenance needs, the next step in developing a cost-effective M&R strategy is to generate several alternative budgets and analyze “what-if” scenarios. By examining the impacts of budget scenarios, the advantages and disadvantages of the 2 funding levels and maintenance strategies can be illustrated.

The budgeted amounts for the 2 scenarios (noted below) include an inflation factor of 3.0 percent over a 10-year analysis period. They also include paving and non-paving costs, staff time, design, construction management, and contingencies:

- Scenario 1: City's Current Budget (\$3.5M/year)
- Scenario 2: Maintain Current PCI of 71 (\$3.2M/year)

The City also provided a list of planned sealing and rehabilitation projects for 2025 and 2026. Those sections (shown with ** in Appendix E) were included as part of the analysis for all two scenarios in the year 2025 and

Budget Analysis

2026 for a total budget of \$1.0M and \$1.7M.

Figure 5 is the map that showing the projects in 2025 and 2026. The detailed results of the budget scenarios are provided in Appendix D and the PCI conditions after treatment in FY 34/35 for each scenario are presented in Appendix F.

Figure 5. Sections Selected for Projects in 2025 and 2026

5.2.1 Scenario 1: City’s Current Budget (\$3.5M/year)

At the City’s anticipated budget of \$0.5 million every year, the network PCI will decrease from 71 to 75 by FY 34/35. Scenario 1 allocated an average of 9.0 percent of the budget towards preventive maintenance. By the end of the analysis period, 81 percent of the network will be in “Good” condition, 6.3 percent will be in “Fair” condition, 1.0 percent will be in “Poor” condition, and 11.7 percent will be in “Very Poor” condition. The deferred maintenance cost will increase from \$25.6 million to \$22.2 million by FY 34/35. Table 4 and Figure 6 show the outcomes under this scenario. A list of sections selected for treatment is provided in Appendix E.

Table 4. Cost Summary for Scenario 1.

Fiscal Year	Current	25/26	26/27	27/28	28/29	29/30	30/31	31/32	32/33	33/34	34/35	Total
City’s Budget (\$M)	N/A	\$1.0	\$3.5	\$3.5	\$3.5	\$3.5	\$3.5	\$3.5	\$3.5	\$3.5	\$3.5	\$32.5
Deferred Maintenance (\$M)	\$25.6	\$20.4	\$22.9	\$22.8	\$22.1	\$23.5	\$23.6	\$23.7	\$24.4	\$23.3	\$22.2	N/A
Network PCI	71	74	74	74	74	74	74	74	74	74	75	N/A

*FY 25/26 and 26/27 includes City’s planned projects.

Figure 6. PCI versus Deferred Maintenance for Scenario 1.

5.2.2 Scenario 2: Maintain Current PCI of 71 (\$3.2M/year)

In this scenario, the goal is to maintain PCI of 71 for the network by the end of FY 34/35. As shown in Table 5 and Figure 7 for Scenario 2, the estimated financial commitment required to accomplish this goal is \$28.6 million over 10 years. Scenario 2 allocated an average of 8.0 percent of the budget towards preventive maintenance. As a result, the deferred maintenance cost will increase to \$28.7 million by FY 34/35. In this scenario, 77.3 percent of the network will be in “Good” condition, 6.7 percent will be in “Fair” condition, 1.2 percent will be in “Poor” condition, and 14.8 percent will be in “Very Poor” condition after 10 years.

Table 5. Cost Summary for Scenario 2.

Fiscal Year	Current	25/26	26/27	27/28	28/29	29/30	30/31	31/32	32/33	33/34	34/35	Total
City’s Budget (\$M)	N/A	\$1.0	\$2.0	\$3.2	\$3.2	\$3.2	\$3.2	\$3.2	\$3.2	\$3.2	\$3.2	\$28.6
Deferred Maintenance (\$M)	\$25.6	\$20.4	\$24.4	\$24.7	\$24.3	\$26.1	\$26.7	\$27.6	\$28.7	\$28.4	\$28.7	N/A
Network PCI	71	74	73	72	72	72	72	72	71	71	71	N/A

*FY 25/26 and 26/27 includes City’s planned projects.

Figure 7. PCI versus Deferred Maintenance for Scenario 2.

5.3 Scenario Summary and Comparisons

Scenario 1: City’s Current Budget (\$3.5M/year) – The network PCI is projected to increase from 71 to 75 by the end of the 10-year analysis period. The cost of deferred maintenance⁶ will decrease from \$25.6 million to \$22.2 million by FY 34/35.

Scenario 2: Maintain Current PCI of 71 (\$3.2M/year) – This scenario assumes that the City will allocate \$3.2 million each year on average to maintain the PCI at 71 by the end of FY 34/35. This will cost \$28.6 million total over 10 years. Deferred maintenance costs will slightly increase from \$25.6 million to \$28.7 million by FY 34/35.

The following table summarizes each scenario and its corresponding 10-year budget, PCI, and deferred maintenance costs at the end of the analysis period. Appendix D shows the cost and network condition summary for each scenario and Appendix F shows the current PCI conditions in FY25/26 and after treatment in FY 34/35 for each scenario. As the City current budget has already increased PCI to 75 by the end of FY 34/35, NCE put Scenario 2 to show how much the City can save if the City decides to maintain the PCI of 71.

Table 6. Budget Scenario Analysis Summary.

Scenario	Description	Cumulative 10-year Budget (\$M)	End of FY 34/35	
			Network PCI	Deferred Maintenance (\$M)
1	City’s Current Budget	32.5	75	22.2
2	Maintain PCI of 54	28.6	71	28.7

Figure 8 compares the annual changes in PCI under each budget scenario, and Figure 9 illustrates the associated annual changes in deferred maintenance under each budget scenario. Under Scenario 1, PCI is projected to remain at 74 and increase to 75 in the last year. In contrast, under Scenarios 2, PCI remains constant at its current level with the PCI of 71(Figure 8) by the end of the analysis period. In addition, as seen in Figure 9, deferred maintenance is projected to decrease by an average of \$0.3 million annually under Scenario 1, while for Scenario 2, it is projected to increase by an average of \$0.3 million annually.

⁶ Deferred maintenance refers to maintenance activities that were either not performed as scheduled or were postponed to a future period due to insufficient funding. This calculation encompasses costs associated with CICM (Construction Inspection and Construction Management), design, and contingencies.

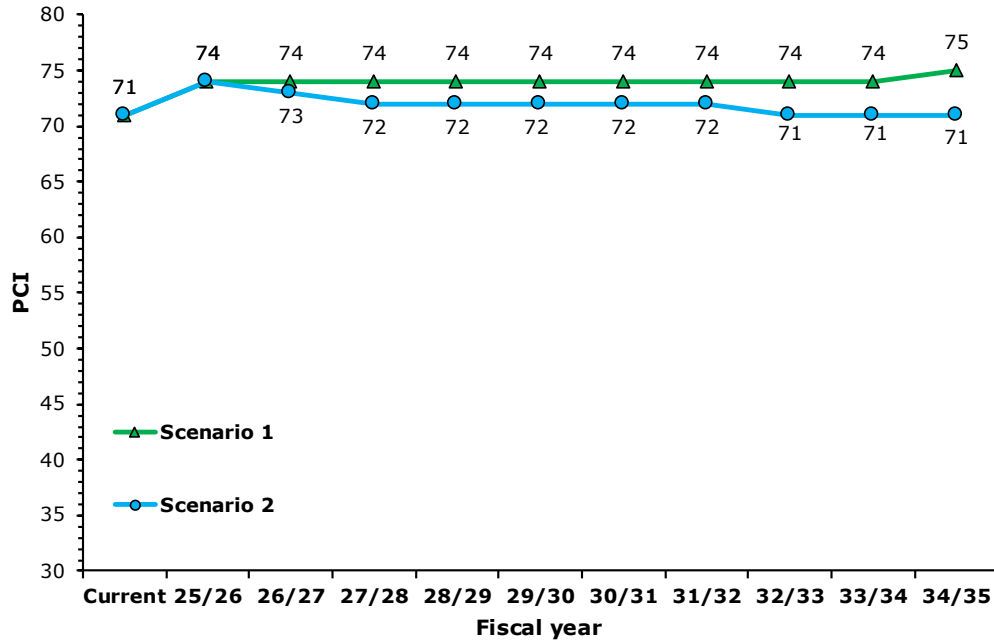

Figure 8. Comparison of Annual PCI by Scenario.

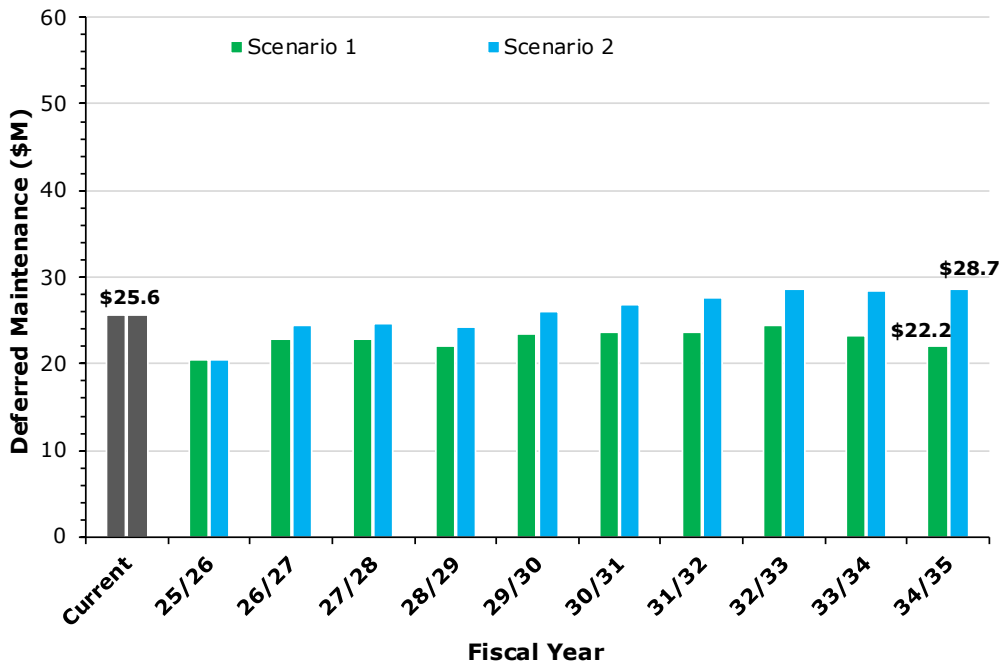

Figure 9. Comparison of Annual Deferred Maintenance by Scenario.

Budget Analysis

Figure 10 illustrates the percent change in pavement condition for each scenario at the end of FY 34/35. All two scenarios will significantly increase the proportion of the network in the "Good" condition with less portion in the "Poor" condition. In both scenarios, the proportion of the network in the "Very Poor" condition will increase, which Scenario 2 has a higher percentage.

Figure 10. Comparison of Pavement Condition by FY 34/35 by Scenarios.

It is important to note that to improve the network condition and reduce the deferred maintenance, the City will retain the existing annual budget.

6 Conclusions and Recommendations

The City of Kerman has made a substantial investment of \$127.4 million in its pavement network. Overall, the pavement network is in the “Good” condition with a PCI of 71. The City’s existing budget (Scenario 1) of \$32.5 million over 10 years is expected to improve the overall network PCI from 71 to 75. Under Scenario 2, PCI would remain at 71 by FY 34/35 with an investment of \$28.6 million.

6.1 Recommendations

NCE recommends that the City remain the funding level to improve the network condition and decrease deferred maintenance. Scenario 1 accomplishes both these objectives by increasing PCI from 71 to 75 and decreasing the deferred maintenance from \$25.6 million to \$22.2 million by the end of FY 34/35. For keep updating the PMP to ensure efficient decision making, the City should consider the following: :

1. **Pavement Maintenance Strategies** – Continue with a well-funded preventive maintenance program to preserve the good streets in “Good” condition and rehabilitation projects to improve pavements in poor condition. This is necessary to maintain at least the portion of the street network in “Good” condition and avoid increasing the deferred maintenance.
2. **Inspection Strategies** – Monitor future pavement performance and ongoing maintenance needs by updating the required inventory of the City’s arterial and collector streets every 2 to 3 years at a minimum. NCE recommends that the City also inspect the residential street network every 4 to 5 years.
3. **M&R Decision Tree** – Review and update the M&R treatment strategies and associated unit costs annually to reflect new construction techniques and costs so that the budget analysis results remain reliable and accurate.

Appendix A

Section Description Inventory – Average (Weighted by Area) PCI

Section Description Inventory Report

This report lists a variety of section description information for each of the City's street pavement sections. It lists the street and section identifiers, limits, functional class (FC), surface type, number of lanes, lengths, widths, and inspected PCI.

All of the City's vehicular street sections are included in the report. The report is sorted alphabetically by Street Name and Section ID and by descending PCIs. The field descriptions in this report are listed on the next page.

Header	Description
Street ID	Street identification in StreetSaver® unique for each street
Street Name	The name of the street as indicated by street signs in the field
Section ID	Section identification number in StreetSaver® unique for each section of one street
Beg Location	Beginning limit of the section
End Location	Ending limit of the section
Functional Class	Functional Classification (A – Arterial, C – Collector, R – Residential)
Surface Type	Surface Type (AC = Asphalt Concrete, AC/AC = Asphalt Concrete Overlay of existing Asphalt Concrete, PCC = Portland Cement Concrete, AC/PCC = Asphalt Concrete Overlay of existing Portland Cement Concrete)
Lanes	Number of lanes of the section
Length (ft)	Length of the section in feet
Width (ft)	Average width of the section in feet
Area (sf)	Area of the section in square feet
PCI	Average Inspected PCI for the section
Condition Category	“Very Good” = PCI > 70, “Good” = PCI > 50 & < 70, “Poor” = PCI > 25 & < 50, “Very Poor” = PCI < 25

Appendix B

Maintenance and Rehabilitation (M&R) Decision Tree

Maintenance and Rehabilitation (M&R) Decision Tree

This report presents the current maintenance and rehabilitation decision tree that exists in the database. The decision tree forms the basis for all of the budgetary computations included in this report. ***Changes to the decision tree will make the results in the budget reports invalid.*** All pavement treatment unit costs relevant to the road types in the database were updated.

The decision tree lists the treatments and costs selected for preventive maintenance and rehabilitation activities. Each line represents a specific combination of functional classification and surface type.

The preventive maintenance portion of the report is identified as Condition Category I – Very Good. All preventive maintenance treatment listings are assigned only to sections in Condition Category I where the PCI \geq 70. Sections with PCI values less than 70 are assigned to treatments listed in Categories II through V.

In the preventive maintenance category (PCI \geq 70), a time sequence is used to identify the appropriate treatment and cost. Each preventive maintenance treatment description consists of three parts: 1) a CRACK treatment, 2) a SURFACE treatment, and 3) a RESTORATION treatment. These three parts allow the user to specify one of three different preventive maintenance treatments depending on the prior maintenance history of the section.

1. The CRACK treatment part can be used to specify the most frequent type of preventive maintenance activity planned (typically crack seals).
2. The SURFACE treatment part can be used to specify more extensive and less frequent preventive maintenance activities, such as chip seals or slurry seals. For example, a crack seal can be specified on a 3-year cycle with a slurry seal specified after 5 years.
3. The RESTORATION part can be used to specify a surface restoration treatment (such as an overlay) to be performed after a specified number of surface treatments. For example, after a certain number of successive slurry seals, an overlay can be specified instead of another slurry seal.

Rehabilitation treatments are assigned to sections in Condition Categories II through V (PCI less than 70). Each line is defined by a specific combination of functional classification, surface type, and condition category.

COLUMN	DESCRIPTION
Functional Class	Functional Classification identifying the branch
Surface	Surface Type identifying the branch number.
Condition Category	Condition Category (I through V).
Treatment Type	First Row (Crack Treatment) indicates localized treatment (e.g., crack sealing). Second Row (Surface Treatment) indicates surface treatment (e.g., slurry sealing). Third Row (Restoration Treatment) indicates surface restoration (e.g., overlay).
Treatment	Name of treatments from the "Treatment Descriptions" report.
Yrs. Between Crack Seals	First Row - number of years between successive treatment applications specified in the first row (i.e., CRACK treatment).
Yrs. Between Surface Seals	Second Row - number of years between successive treatment applications specified in the second row (i.e., SURFACE treatment).
Number of Sequential Seals	Number of times that the treatment application in the second row (i.e., SURFACE treatment) will be performed prior to performing the treatment application in the third row.

Note that the treatments assigned to each section should not be blindly followed in preparing a road maintenance program. Engineering judgment and project level analysis should be applied to ensure that the treatment is appropriate and cost effective for the section.

Appendix C
Budget Needs

Budget Needs Reports

The purpose of this section is to answer the question: *If the City had all the money in the world, what sections should be fixed and how much will it cost?* Based on the Maintenance & Rehabilitation (M&R) decision tree and the PCIs of the sections, the program will then select a maintenance or rehabilitation action and compute the total costs over a period of ten years. The Budget Needs represents the "ideal world" funding levels, while the Budget Scenario reports in the next section represent the most "cost effective" prioritization possible for the actual funding levels.

A budget needs analysis has been performed. The summary results from the analysis are shown below. An interest rate of 3% and an inflation factor of 3% were used to project the costs for the next ten years. This report shows the total ten-year budget that would be required to meet the City's standards as exemplified in the M&R decision tree.

Budget Needs reports included in this appendix are listed below:

- Projected PCI/Cost Summary
- Preventive Maintenance Treatment/Cost Summary
- Rehabilitation Treatment/Cost Summary
